

Blackwater Electric

History

Blackwater Electric is proud to be a premiere electrical contractor in the southeastern United States since 1993. Offering products and services that run the full spectrum of electrical design and installation, sophisticated communications and energy management, the management team offers a combined 130 years of experience in field operations, administration, and project management. As Blackwater Electric's reputation for quality and dependability has spread over the years, the scope of company's operations has widened from Hampton Roads to the rest of Virginia, on to North Carolina and Florida.

Blackwater Electric is a trusted source for government, commercial and industrial business communication cabling services. Specializing in voice and VoIP phone systems, fiber optic, security and network data cabling solutions, Blackwater Electric's qualified in-house designers and technicians have the expertise to design, install and maintain any sized system. A single source telecommunications and security system provider, Blackwater Electric is committed to providing the best in equipment, cabling and infrastructure planning. From analog lines to PRI's, VoIP, MPLS and point to point circuits, the Blackwater Electric team offers cost-effective solutions, solid references, and responsive customer service

Also highly experienced in automation and control systems integration, Blackwater Electric offers unique abilities as a single source of responsibility for a complete plant or for a new facility automation project. With unparalleled capability to repair, modify, calibrate and install instrumentation and related control and automation applications, the company also has expertise in fabrication of control panels, implementation of shutdown assistances, and customized control loops for customer specifications.

Blackwater's broad scope of experience also encompasses projects for new construction, major shutdowns, plant relocations, contract maintenance and capital expansions throughout the Eastern Seaboard. Well versed in Design-Build and LEED projects, the Blackwater team's expertise spans contract negotiations, project estimating, and document preparation. Capabilities include coordinating trades, developing partnerships, and collaborating with architects, engineers, local officials, vendors, and clients – all while maintaining cost and quality control.

In 17 years since company principals Kimberly and David Hart entered the electrical services industry, they have continually expanded their electrical contracting services to be on the forefront of emerging technological advancements and sophisticated energy management. Blackwater Electric remains family-owned and committed to providing superior services with the same high quality standards and commitment to client satisfaction as when they started the business.

Kimberly Hart, President, and David Hart, Senior Vice President, said, “Our company is founded on principles of Accountability, Agility and Results. We take pride in offering unyielding integrity, respect for our clients, and a concentration on detail which form a strong foundation for our operations. Vision, technological innovation and flexibility are our corporate culture. Performance, hard work and quality control are the framework for success.”
